

Inflatables Guidelines

- We prefer that the bounce house be inside in order to avoid wind exposure. If outside, please confirm that the device is securely anchored. The unit should not be operated if wind gusts exceed 20 MPH.
- Please confirm that there will be adult supervision at all times.
- Participants should be grouped according to size. Tots bounce with tots, bigger kids bounce with bigger kids.
- The number of jumpers allowed to enter at one time should also be monitored. No more than 4-6 children at one time, depending on the size of the unit. The manufacturer of the device may provide a weight capacity or maximum jumper number.
- Any stakes in the ground should be covered with cones or protective material making them easy to see. Any cords or air compressors should be placed in areas away from heavy foot traffic and secured.
- All manufacturer recommendations should be followed.
